The United States system of units of 1832 is based on the system in use in Britain prior to the introduction of the British imperial system on January 1, 1826. Both systems are derived from English units, a system which had evolved over the millennia before American independence. The United States customary units of length, area, weight, and capacity are all based on the British units, which were themselves derived from Roman units. The customary system was used by the United States Geological Survey, the United States Census Bureau, the United States Bureau of Standards, and the United States Department of Agriculture.
